

# Post-Mainshock Probabilistic Risk Quantification: Why and How?

2012 EERI Annual Meeting & National Earthquake Conference

**Nicolas Luco**  
Research Structural Engineer  
*USGS – Golden, CO*

## Aftershocks can be ...

- ... closer to your structure of interest,
- ... of a larger magnitude,
- ... numerous,
- ... persistent over a long time period,
- ... *and damaging.*
  
- Same for “triggered” or “clustered” earthquakes.

2012 EERI Annual Meeting & National Earthquake Conference: Session on “Incorporating Aftershocks in Risk Analysis”

“Post-mainshock probabilistic risk quantification: Why and how?,” N. Luco, USGS

April 12, 2012

## Risk analysis is already the basis for ...

- ... long-term or “pre-earthquake” mitigation via insurance,
- ... ground motion maps for “building codes” (2012 IBC / ASCE 7-10, ASCE 43-05 for nuclear power plants), and
- ... next-generation seismic design procedures for new & existing buildings (ATC-58).

2012 EERI Annual Meeting & National Earthquake Conference: Session on “Incorporating Aftershocks in Risk Analysis”

“Post-mainshock probabilistic risk quantification: Why and how?,” N. Luco, USGS

April 12, 2012

## “Aftershock risk analysis” can be basis for ...

- ... short-term or “post-earthquake” mitigation decisions that hinge more directly on what could happen (e.g. collapse in an aftershock) than what has happened (i.e. damage state immediately after mainshock).
- For example ...

“Post-mainshock probabilistic risk quantification: Why and how?,” N. Luco, USGS

April 12, 2012

## Building Tagging

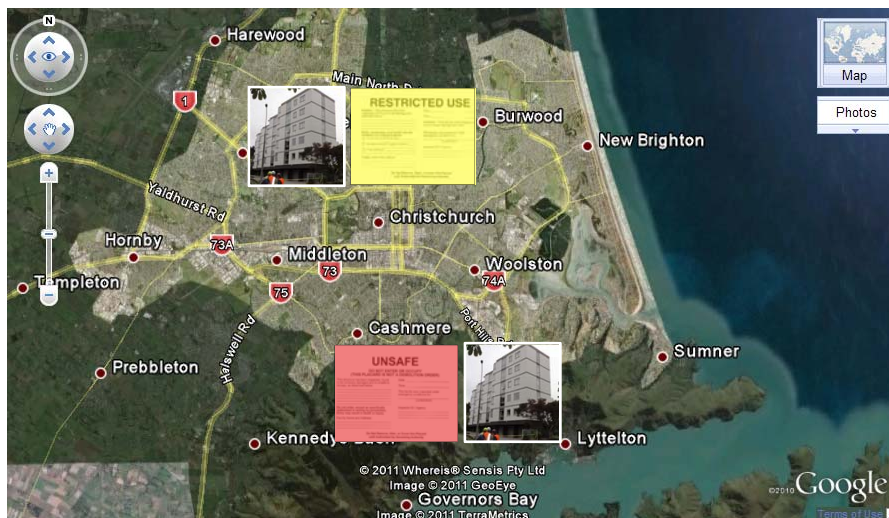

- Aftershock risk analysis information can be automated

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Inspection Prioritization

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## “Aftershock risk analysis” projects ...

- Yeo & Cornell, 2005 (PEER Report 2005/13)
- PEER “Advanced Seismic Assessment Guidelines” (Bazzurro *et al*, 2006)
- SCEC “Automated calculation of damage state exceedance probabilities from aftershocks” (Gerstenbeger *et al*, 2007)
- NZ Earthquake Commission (Gerstenberger *et al*, 2012)
- CU Boulder & USGS (Liel *et al*, 2013)
- NSF (Li & van de Lindt *et al*, 2014)

2012 EERI Annual Meeting & National Earthquake Conference: Session on “Incorporating Aftershocks in Risk Analysis”

“Post-mainshock probabilistic risk quantification: Why and how?,” N. Luco, USGS

April 12, 2012

## “Risk Integral”

- Combination of ground motion hazard curve & building fragility curve (e.g. McGuire 2004)

$$\lambda[\text{Collapse}] = \int_0^{\infty} \underbrace{\text{Pr}[\text{Collapse} \mid \text{IM} = a]}_{\text{Building Fragility Curve}} \underbrace{\left| \frac{d\lambda[\text{IM} > a]}{da} \right|}_{\text{Ground Motion Hazard Curve}} da$$

Collapse Risk (in time T)
Building Fragility Curve
Ground Motion Hazard Curve

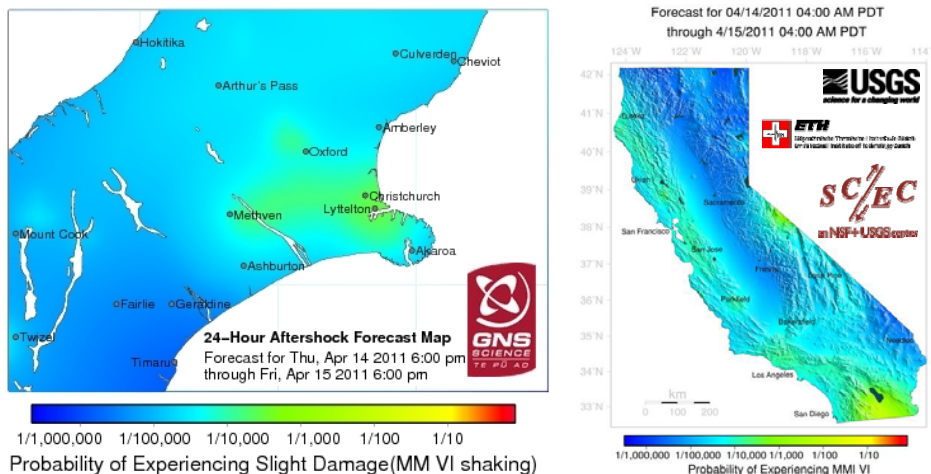

- An application of the total probability theorem

2012 EERI Annual Meeting & National Earthquake Conference: Session on “Incorporating Aftershocks in Risk Analysis”

“Post-mainshock probabilistic risk quantification: Why and how?,” N. Luco, USGS

April 12, 2012

## Aftershock Ground Motion Hazard

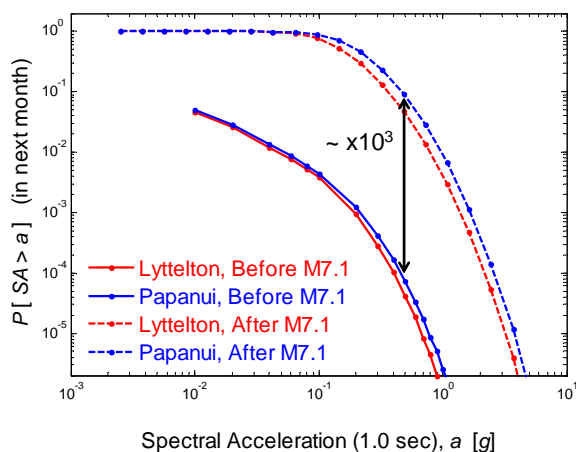

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Aftershock Hazard Curves

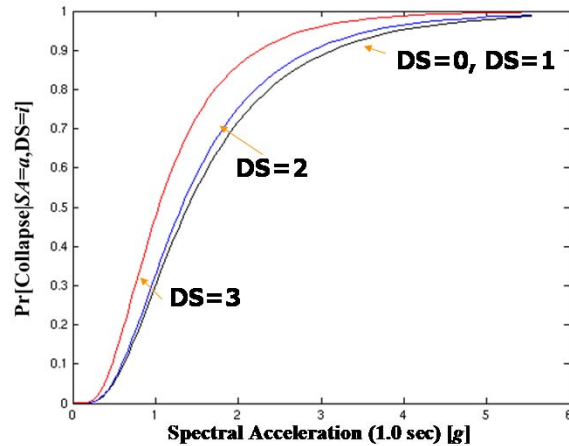

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Damaged-Structure Fragility Curves

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Post-Earthquake Damage State?

- Can be ascertained by ...
  - post-earthquake building inspection
  - risk integral with ShakeMap ground motion "hazard"
  - building instrumentation
- Uncertainty in post-earthquake damage state accounted for via theorem of total probability, i.e. ...

$$\Pr[\text{Collapse} | \text{IM} = a] = \sum_{i=1}^n \Pr[\text{Collapse} | \text{IM} = a, \text{DS} = i] \Pr[\text{DS} = i]$$

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Related Problems

- Pre-mainshock risk analysis that accounts for aftershocks, triggered earthquakes, and clusters (e.g. van de Lindt & Li's NSF project)
- Deterministic scenarios of sequences of large earthquakes like New Madrid 1811-1812 (using damaged-structure fragilities)

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS

April 12, 2012

## Parting Thoughts

- Earthquake engineers should more fully utilize aftershock hazard information from earthquake scientists
- Building tagging & inspection prioritization should be (at least partially) based on post-mainshock probabilistic risk quantification
- Reconnaissance data should include performance of mainshock-damaged buildings in aftershocks

2012 EERI Annual Meeting & National Earthquake Conference: Session on "Incorporating Aftershocks in Risk Analysis"

"Post-mainshock probabilistic risk quantification: Why and how?," N. Luco, USGS
